ABOUT REVOLUTION:

Revolution is an entirely new design and not just on the surface. Using new techniques (patents pending) developed by Hunter Pacific International in Australia, it is now possible to make slim, elegant motors for ceiling fans and this opens the way for new shapes never before possible.

Advanced aerodynamic blades and electronic control means the Revolution is at the cutting edge of ceiling fan efficiency, drawing only 48 Watts on high speed while moving more air than similar size fans that are thicker in size and heavier. When operating to supplement other cooling and heating devices this fan consumes as little as 5W when running on the lowest speed setting.

Clever engineering allows the Revolution to have its major parts removed and replaced without requiring an electrician in most States of Australia, allowing faster turnaround time and reducing service costs.

Product Features:

- Safe, quiet polymer blades
- Reversible airflow from remote
- Not light adaptable
- 7 selectable speeds for Summer (forward) or Winter (reverse) use
- Angled ceiling mount (up to 38°)
- Robust die-cast aluminium body and canopy
- Innovative, slim & powerful AC induction motor
- Eco-friendly, Low Power Consumption Product
- 52" (1320mm) blade sweep
- Suitable for use with Building Automation Systems (when using additional (accessory) interface)
- High efficiency aerofoil blade design
- Coastal/Indoor/Outdoor undercover use
- IP44 rating
- Threaded downrod
- User serviceable
- 2 years defect warranty on control module and handset. 3 years defect warranty on mechanical parts
- 5 years defect warranty on electrical motor parts (stator, rotor and windings)

IMPORTANT: This product is designed to be user serviceable. Parts such as electronic modules and the motor can be removed from the ceiling and replaced without requiring an electrician. On-site labour is therefore not provided for most warranty claims unless special authorisation is obtained from Hunter Pacific International.
